Senior Full Stack Engineer with 5+ years of experience building scalable web platforms, cloud-backed applications, and AI-powered products. Specialized in TypeScript, React, Next.js, Node.js, and AWS, with hands-on experience designing high-performance systems across frontend, backend, and infrastructure. Strong focus on clean architecture, developer experience, accessibility, and product scalability, with recent work centered on AI agents, RAG pipelines, and LLM-driven workflows that solve real business problems.

Skills

Technical skills: TypeScript, ReactJS, NextJS, NestJS, Node.js, Gatsby, Tailwind CSS, Redux, Zustand

AI & Data Engineering: Generative AI, RAG Pipelines, Agentic Workflows, LangChain, LlamaIndex, Model Context Protocol (MCP)

Databases & Infrastructure: PostgreSQL, MySQL, AWS, Docker, Linux, CI/CD

Developer Productivity & Tools: Git, Claude Code, Cursor, v0.dev, Postman

Professional Experience

Software Engineer

Outsentia, Islamabad

June 2026 - Present

- Built a multi-agent financial research platform (TypeScript/Mastra) automating earnings monitoring, analyst report drafting, and research chat.
- Designed a self-healing daily monitor that ingests earnings/event data, drafts digest emails, and updates calendars unattended via MCP integrations (Aiera, Gmail, Drive, Calendar).
- Engineered a 5-pass anecdote-generation pipeline generating polished analyst anecdotes with verbatim KPI grounding.
- Built a conversational research agent with semantic memory recall and per-request tool routing.

Senior Full Stack Engineer

AIO (Silicon Valley Startup), Islamabad

April 2024 - June 2026

- Architected a dual-environment publishing system (Live/Staging) and steered a tech stack migration from Gatsby to Next.js, enhancing scalability, SSR capabilities, and infrastructure security via protected public APIs.
- Engineered a comprehensive website management suite, including a centralized overview dashboard integrated with GA4/GSC, a robust templating and drafting system, and an integrated image library with in-app editing and optimization.
- Developed an independent responsive styling engine with one-click mobile overrides, ensuring ADA-compliant architectures that consistently achieve high Lighthouse scores and optimized Core Web Vitals.
- Led the engineering of collaborative tools, including real-time multi-user synchronization and dynamic form builders, while automating AWS-driven deployment pipelines for seamless domain and SSL configuration.
- Proactively took an initiative to suggest and implement feature enhancements to uplift the builder's UX, driving product growth through the introduction of real-time multi-user synchronization and dynamic form-building tools.

Frontend Engineer
99 Technologies, Islamabad
Jan 2022 - March 2024

- Joined as the sole Frontend Developer and mentored the expansion of the engineering team to deliver robust internal enterprise solutions.
- Owned the development of the Inventory Management System (IMS), centralizing inventory, sales, and purchase modules to streamline core business operations.
- Built the frontend for the SJ Computers platform, implementing smooth checkout flows and guest user management using Next.js and Material UI.
- Developed and maintained backend APIs to support seamless frontend integration, ensuring data consistency across e-commerce and internal management tools.

Web Developer
2nd Mouse Venture, Islamabad
Dec 2020 - Dec 2021

- Developed and maintained the company's Learning Management System (LMS), delivering core virtual classroom features such as class scheduling, video and screen sharing, whiteboarding, annotations, and real-time chat.
- Designed and built dedicated portals for teachers, sales, and administrative teams to support internal workflows and meet diverse product requirements.

Projects

AI Builder

- Built a custom No-Code builder for the restaurant industry featuring live/staging workflows, a collaborative multi-user environment, and a drafting/templating engine.
- Developed an integrated analytics dashboard utilizing GA4 and Google Search Console APIs to provide users with real-time performance and SEO insights.
- Engineered a performance-first asset suite with automated media optimization, ADA-compliant rendering, and independent CSS overrides for mobile-specific styling.

AI Trading Assistant

- Architected an AI trading assistant with FastAPI backend and Next.js streaming chat, integrating Ollama LLM for intelligent portfolio analysis and real-time market insights.
- Implemented a sophisticated LangChain agent framework with RAG (ChromaDB vector store), portfolio tracking tools, web search integration, and persistent memory, enabling context-aware, multi-step reasoning for financial decision-making.
- Implemented ReAct-style in-chat tool orchestration to perform portfolio CRUD, coin price lookup, and news retrieval.

Business Operations Management System (BOMS)

- Designed a unified platform for managing end-to-end business operations, including purchase orders, shipping, invoicing, and financial transactions.

- Implemented a monorepo-based modular architecture, separating core business domains (Inventory, Finance, CRM) for improved maintainability and team collaboration.
- Built feature-rich modules for vendor and customer management, enabling granular activity tracking and automated relationship management.

Education

COMSATS University Islamabad, Wah Campus

2017 - 2021

Bachelor of Science in Computer Science

Certifications

Architecting Solutions on AWS

Coursera (AWS)

Application Development using Microservices and Serverless

Coursera (IBM)

AWS Generative AI for Developers

Future Learn
